PROBLEM TO BE SOLVED: To control the spray of an agent from a spray nozzle of an aerosol can even to one second or below with a simple structure.

SOLUTION: In the automatic spray device for aerosol can, in which the aerosol agent inside the can body is sprayed by vertically erecting the spray nozzle 12 attached to a valve in a closed position in a normal state from the upper end of the can body 10 and displacing the spray nozzle from the vertical erecting state to turn the valve to the opened position and the aerosol can is housed in a housing chamber 21, a solenoid 1 for turning the valve to the opened position by letting a plunger 1' interact directly on the spray nozzle 12 by excitation to displace the nozzle from the vertically erecting state is provided inside the housing chamber.
